Dr. Saowaluck Tibpromma, Associate Editor

Asst. Prof. Dr. Cholpisut Tantapakul, Guest Editor

Dr. Munikishore Rachakunta, Guest Editor

Dr. Chayanard Phukhamsakda, Scientific Editor

Fungal Biotec

Endophytic fungi and their potential applications

Endophytes are important components of microbial biodiversity, residing in the living tissues of host plants from which they obtain nutrients and protection. In return, they contribute to the plant by producing a plethora of secondary metabolites through biotic and abiotic stress that provide protection and, ultimately, survival value to the host. In addition, effective compounds may be used to treat newly developing diseases. This special issue entitled, “**Endophytic fungi and their potential applications**” in *Fungal Biotec* is now open to receive submissions of full-length research articles and review papers for peer-review and potential publication.

The special issue aims to compile a collection of papers focusing on the abilities of endophytic fungi, chemistry, and biological studies. We also encourage authors to send a short abstract or tentative title to us (fungalbiotec@gmail.com) in advance. Please do not hesitate to contact us if you need any further information.

Keywords

- Bio-active natural products
- Drug discovery
- Endophytic microbes
- Natural product chemistry
- Prospective applications
